

Introducing Pivotal Accounts – developed for owner operated businesses

With 25 years experience as a management accountant, Lyn Donnally has worked with businesses to streamline and improve business reporting. Having had the opportunity to work in many industries and come across the same issues no matter how big or small the business may be. These issues revolve around hampered decision making, due to the lack of meaningful reports in key areas.

Big business has the benefit of in house IT specialists or a team of accountants – but how can this be achieved if **you** are your business? When you are an owner operator you often have little time to deal with parts of your business that are outside your expertise, like the dreaded accounts.

The accounting world is full of confusing language – with accounting software that can be hard to master – so your paperwork ends up in a cardboard box for the accountant to sort out at BAS time. If this sounds like your approach to accounting for your business then we may have the product for you.

Streamed have developed a simple to use accounting tool called Pivotal Accounts which is built in “Excel” – all data is entered to one sheet in the program and with a click of a button, all of your vital business reports are updated. If you make a mistake just overwrite the number. There is no need to enter your data in any particular order, and you can set up a budget in the same sheet so you can see how your business is tracking.

What will this mean to you and your business – you will have all of the key information you need to make great business decisions at your finger tips at the right time, including Profit and Loss Report month by month, outstanding suppliers and debtor reports, credit card and bank account analysis and all the figures you need for your BAS. ***Pivotal Accounts is a powerful tool with a little price - just \$149***

Streamed are so confident you will love this product they will give you the opportunity to download the program for a 15 day free trial – so go on - have a look and take control
